

# Specification Challenge II

## Sumsi Drawing Competition

### Coding School

### December 2021

#### General Information

The challenge named Sumsi Drawing Competition involves a platform where children can submit their self-painted pictures . The goal is to develop a website that allows users to upload images, browse through other user's images, and rate them.

#### Requirements

##### Screen Designs

No screen designs will be provided for this challenge. The website must differ from the later described example page and should not look the same.

The designs must ensure that logos and colors of Raiffeisen Landesbank Kärnten are used. Here are the color codes, fonts, and assets: [Raiffeisen Design Assets](#) .

##### API Documentation

There should be an API (backend) that the front-end project should be connected with.

API should work efficiently to achieve all the functionality required for this project.

##### Basic Concept / Navigation

The website should have a navigation system adapted to the concept, allowing users to move between the most important areas. It is essential that all the information currently

## Feature Description

### General Information

This section should present general information about the Sumsi Drawing Competition in text form.

### Upload Pictures

There should be an option to upload a picture. Only one picture can be submitted per email address. When uploading, all parameters that can be found in the API documentation must be included. Consent for individual data protection topics must also be collected. For more information on data protection topics and correct wording, including a screenshot, please refer to the assets at Raiffeisen Design Assets.

### All Pictures

This section will display a list of all submitted pictures. After a certain point, no new pictures can be uploaded. There is an API call for this that returns true or false to check the status. From this point onwards, all images are open for voting. Each email address can give 5 votes. Only one vote per person per image is allowed. It should also be displayed how many votes a picture has already received. Again, there is an API call to check if the voting is active.

### Info / Conditions

there is a section in the footer with information or conditions (Data Protection, Participation Conditions, Imprint, Terms and Conditions, Disclaimer, Cookie Policy). These pieces of information should also be included and attractively displayed in this project.

### Multi language

The website should support both German and English. There should be a menu item to select the desired language.

### Notes

Generally, the entire project should be implemented in the design of Raiffeisen Landesbank Kärnten. The project should be built to be stable and functional. Please ensure that everything is in order upon submission (correct paths for styles, images, etc.). If a version cannot be built, no points will be awarded for the entire project.

Good luck, Merry Christmas, and a Happy New Year!
